**Abstract** *Staphylococcus aureus* is a common cause of skin and soft tissue infections. The organism is highly resistant to antibiotics and is often found in the community. The purpose of this study was to determine the prevalence of *S. aureus* in the community. A total of 100 samples were collected from the community and analyzed for the presence of *S. aureus*. The results showed that 60% of the samples were positive for *S. aureus*. The study also found that the majority of the isolates were susceptible to all antibiotics tested. The results of this study suggest that *S. aureus* is still a common cause of skin and soft tissue infections in the community.
